AUTHOR: Florescu, M. (Minister of the petroleum and chemical industry) 10

TITLE: Achievements of the Rumanian chemical industry 6

SOURCE: Revista de chimie, v. 15, no. 8, 1964, 443-448, and insert facing p. 448

TOPIC TAGS: chemical industry, economic development, government economic planning, industrial statistic 11

Abstract [Author's English summary modified]: The author summarizes the development of the Rumanian chemical industry during the last 20 years and especially in the period 1960 to 1963. Data is given for the main branches of the industry, namely fertilizers, plastics, synthetic fibers, synthetic rubber, synthetic resins, dyes and drugs, as well as on basic organic and inorganic chemistry. The annual rate of growth of the chemical industry for the period 1960-1963 averaged 25.6% as against 14.6% for Rumanian industry as a whole; investments in the chemical industry were 19.3% of total investments in 1959 and are planned as 20% of the total for 1960 through 1965.

"Considerations on the Fungal Infection of the Ears"

Bucharest, Revista Sanitara Militara, Vol. 62, No. 3, May-June 1966; pp 579-582

Abstract: Of 27 patients in 15 months, 7 were men, 16 women and 4 children aged 6 to 15; all of them had chronic otitis externa and media revealed to be due to fungi: culture showed *Aspergillus niger* in 21, *A. fumigatus* in 3, *A. flavus* in 2, *Candida albicans* in 1 of the children. Nystatin and older-type dye treatment was generally quite successful. Manuscript received 2 October 1965.

Orig Pub: Zh. med. nauk. Akad. RNR, 1956, 1, No 2, 163-170.

Abstract: The cortex of the hemispheres in cats, with the exception of the right frontal lobe, was removed. Within 2 1/2 years the bilateral loss of the protective defense reflex was noted, together with

Card 1/3

RUMANIA / Human and Animal Physiology. The Nervous System.

T

Abs Jour: Ref Zhur-Biol., No 9, 1958, 41697.

Abstract: the loss of the rightsided tactile reflex for standing and posture correction. Rhythm adoption was observed only in the right frontal area after rhythmical stimulation with light at frequencies of 140-470 osc./min. In leads from other areas of the skull, irregular, high amplitude waves of frequency  $\sim 1$  osc/sec. were observed. Inclusion of total illumination blocked the adoption of the stimulation rhythm in the frontal lobe. Interrupted sound stimulation was followed only by respiratory changes and the appearance in all leads of waves of 1 osc./sec. Histologically-total bilateral degeneration of the lateral geniculate bodies was demonstrated. It was established by this method that there exist direct pathways

**Water metabolism in pemphigus.** Böök Véter, Károly  
Florian, and István Rácz (Füldománygyógyászati Rész- és  
Nemkórházi Klinika, Budapest). *Országos Hírlap* 89, 97.  
1948. — Investigations on 7 persons suffering from  
Dühring's disease and on 5 suffering from pemphigus showed  
that in 10 cases the relative amt. of globulins significantly  
increased. The globulin amounted in 5 cases to more than  
80% of the total protein content of the serum. The amt.  
of plasma in circulation was detd. by the method of Heil-  
meyer (C.A. 24, 333). The normal value was 42 cc. per kg.  
body wt. The patients showed values between 33.1-48.4  
cc. kg. The disturbances of water metabolism in pemphi-  
gus are probably of interstitial or of intracellular origin, the  
latter being more probable. The disturbances may also be  
due to an adrenocortical deficiency owing to a lesion of the  
adrenal cortex and large colloid-like mols. decreasing intra-  
cellularly to smaller mols. which appear as osmotic factors.

2373. FOLDVARI F. and FLORIAN E. \*Deep mycotic infections, relating especially to blastomycosis HUNG. MED. WEEKLY 1954, 95 (85)

The authors observed 17 cases: 3 blastomycosis type of Gilchrist, 12 type of Busse-Buschke, 1 fatal septic case caused by Nocardia asteroides and 1 circumscribed deep infection of the upper lip produced by Nocardia grisea globispora. In the majority of cases (9 out of 12) of the Busse-Buschke type the symptoms were located on the gluteal region with deep and widespread infiltrations, abscesses and communicating fistulae. Ulcerations had not developed in these cases. Out of the 15 cases of blastomycosis the fungus was identified in 11 by histology or by culture. In 14 cases the cutaneous test was positive. The condition of the patients was satisfactory even after many years. The therapy consisted of vaccination, sulphamides, penicillin and iodine. Stilben derivate was used in 2 cases. Two patients died; in one the disease lasted 23 years, in the other 26 years. The infection caused by Nocardia grisea globispora was cured by 7,080,000 units of penicillin.

4J-120 551.594.5(439.1)  
Berkes, Zoltan and Florian, Endre, Sarkifeny  
Magyarország 1938, januar 25-26-an. [Aurora in  
Hungary on Jan. 25-26, 1938.] Idojaras, 42 (5/6):  
117-123, May 1938. 4 figs., 4 refs. German summary  
p. 145. DLC--This contribution to the rich observa-  
tional material available for the intense auroral  
activity of Jan. 25-26, 1938 comes from a country  
where auroras are rarely seen. In a summary, based on  
some 200 individual eye-witness reports, drawings and  
photographs, the general development of the phenomenon  
is described. From 8:14 p.m. Jan. 25 to 3:30 a.m. Jan.  
26 a total of 7 displays were observed, two of them  
with a luminosity unprecedented in Hungary since 1870.  
The location of the aurora is put between 50 and 55°N  
lat at a height of 200-300 km. Accompanying magnetic  
disturbances, radio propagation anomalies and static  
are mentioned. Earlier observations of auroras in  
Hungary are listed. Auroral theory is reviewed briefly.  
Subject Headings: 1. Aurora of Jan. 25-26, 1938  
2. Low latitude auroras 3. Hungary.--G.T.
